

Acknowledgements

VFA, Inc. extends our appreciation to the Kentucky State University-Frankfort. We wish to acknowledge the time and effort put forth by everyone who assisted with the Kentucky State University-Frankfort System Lifecycle Assessment.

Thank you to any individuals that offered guidance and assistance during the project and contributed to the success of the project.

The members of the project team went to great lengths to assure that the information they collected was accurate and concise, and of the utmost value to Kentucky State University-Frankfort .

There are other members who undoubtedly participated in this project, though may not have been mentioned in this acknowledgement. To those, we express our appreciation for your help and input.

Report Disclaimer

VFA has produced this document under an agreement between VFA and Kentucky State University-Frankfort March, 2005. Other than to Client, VFA disclaims any obligation to any other person with respect to any material presented in this document and no person may rely upon this document without advance and express written consent from VFA and such person's written agreement to be bound by the limitations, qualifications, terms, conditions, and indemnities to VFA set forth in that agreement. VFA specifically states that its review of the property in question is subject to monetary restraints and scope limitations. Given those limitations and conditions, VFA has made what, in its opinion, is a reasonable investigation, limited to visual observations. Design analysis of systems including structural systems has not been performed. VFA has also relied upon interviews and documents with the understanding that independent verification of their factual content is beyond the scope of VFA's work.

The materials presented in this document are "to VFA's knowledge" where such phrase means to VFA's actual knowledge of the subject matter after such inquiry as VFA considered reasonable in light of the qualifications and limitations upon the scope of work.

Assumptions regarding the overall condition of the properties have been developed based upon inspection of "representative" areas of the facilities. As such, the development of schematic methods and associated costs for the correction of identified deficiencies is based upon the overview inspection and is also limited with respect to completeness.

Investigation for the presence of asbestos containing materials (ACM), PCB's, CFC's, radon and other environmentally hazardous materials is not part of this Agreement. In addition, a review and certification that the buildings have been designed to meet current seismic requirements is not part of this review.
